Title: Sr. Cloud Architect

Reports to: Director, Cloud Consulting

About CleanSlate

CleanSlate provides dedicated practices and specialized consulting services around Cloud, Enteprise Integration, Enterprise Applications and IT Asset Management. CleanSlate exists to make it easy for companies to adopt leading edge cloud technology solutions that accelerate business outcomes.

Cloud Architect Consultant

We are looking to add a Cloud Architect to our team. If you are passionate about advising, designing, delivering quality solutions and thrive in a fast paced, forward-thinking environment, then this could be the ideal opportunity for you. As a Cleanslate consultant you will be able to work with a team of technical experts to execute and drive results for CleanSlate clients.

As part of the CleanSlate Cloud Practice, you will have opportunity to work closely with our CleanSlate technical team, Client business and technical teams to deliver DevOps solutions.

- Shape and deliver on a strategy to collaborate and provide leadership to clients to leverage cloud services within strategic Enterprise accounts.
- Represent CleanSlate in face-to-face meetings and own the overall technical relationship between CleanSlate and the customer.
- Advise and consult on Cloud architectures to advance clients in technology trends in IoT, Big Data, AI, Serverless, and traditional cloud migration and transformations of compute, storage, and associated applications.
- Experience with designing and deploying highly available and highly reliable systems utilizing Cloud Architected Framework experience
- Be a thought leader in establishing scalable next-generation cloud architectures for clients.
- Lead cross-functional implementation teams to deliver world-class solutions to clients
- Learn, coach, and share knowledge and skills with other CleanSlate team members
- Identify and take lead on opportunities to improve individually and at the organizational level

Responsibilities:

- Work closely with cross-functional teams to understand the IT business requirements, drive the analysis and design the technical solutions in compliance with architectural blueprints and business strategies
- Use DevOps methodologies to automate existing processes and design new cloud-based infrastructure based on infrastructure as code mindset
- Provide infrastructure architecture advice, planning guidance, and quality assurance guidance to development and infrastructure teams
- Provide insight into and knowledge of the latest cloud architectures, technology, solutions, and industry trends
- Customer facing skills, ideally gained in presales or consultancy roles, allowing them to represent cloud in discussions with senior personnel
- Demonstrated ability to think strategically about solutions to business, product, and technical challenges.
- Awareness of technology trends and how they impact the way businesses consume IT
- Guide customers to ensure success in building and migrating applications, software and services following the principles of the AWS Well-Architected Framework.

- Help educate enterprise customers on the value proposition of Cloud, and participate in deep architectural discussions to ensure solutions are designed for successful deployment in the cloud.
- Act as a technical liaison between customers, service engineering teams and support.

Basic Qualifications

- 8 years of experience in the design and implementation of IT solutions (including scalable cloud-based solutions and microservices architectures)
- Experience with automation to deploy and manage infrastructure, database and networking architectures for Internet-scale applications
- Experience in facilitating design and working sessions with clients
- Experience with network fundamentals such as TCP/IP, DNS, DHCP and Routing
- Experience presenting to diverse customer base (CTOs, Enterprise Architects, IT Management, and developers)
- Bachelor's Degree or equivalent experience

Preferred Qualifications

- 5 years experience in a customer-facing, sales-aligned role such as consultant, solutions engineer or solutions architect
- Experience with key AWS services like EC2, S3, IAM, VPC Configuration, etc.
- Experience configuring IAM User, Roles and Policies for multi account authentication
- Experience with utilizing tools like Terraform or CloudFormation to build Infrastructure as Code (IaC)
- Experience with Cloud methodologies, frameworks, automation, and industry leading trends like DevOps
- Experience with Cloud Cost Optimization and Security tools like Trusted Advisor, CloudCheckr, etc.
- Experience utilizing the AWS TCO calculator to help project forecasted costs
- Ability to perform basic network troubleshooting and high availability concepts
